

RTK Corrections at Your Fingertips

The Intuicom RTK BRIDGE®-X delivers RTK corrections where you need them and when you need them. With its robust array of communication capabilities—WiFi, Ethernet, Bluetooth, Radio (either 900MHz or UHF), GPS, and Cellular (either SIM-based or Verizon Wireless)—you are ensured access to your critical data

Data that is Accurate and Repeatable

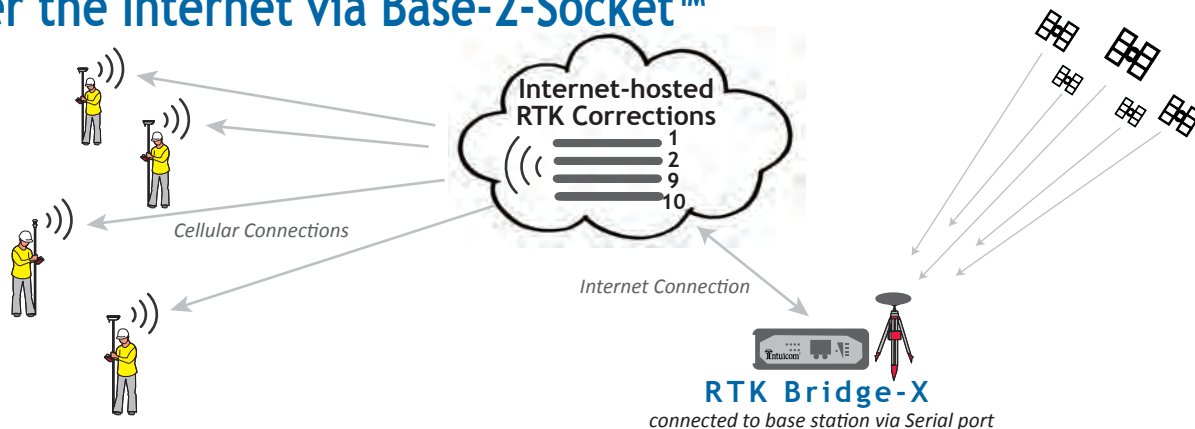

As the RTK Bridge-X receives RTK corrections, those corrections can then be rebroadcasted via the internal radio found in the RTK Bridge-X to any number of machines making your RTK corrections not only accurate, but repeatable.

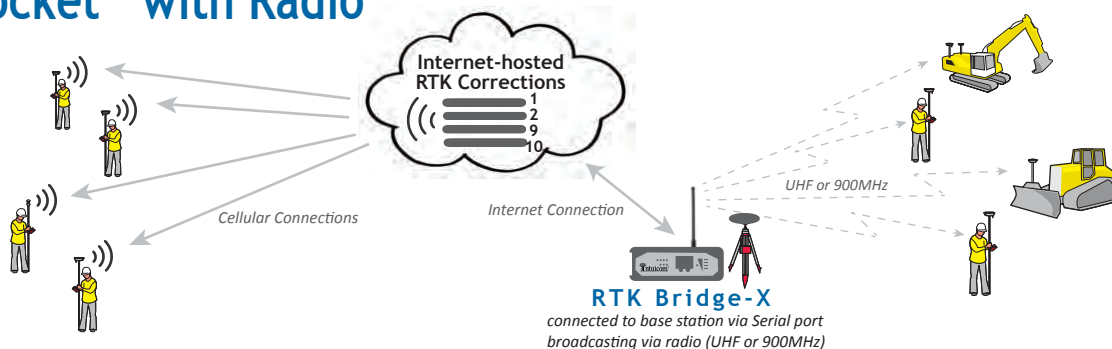

Corrections When No Network RTK Corrections Are There

Intuicom's exclusive Base-2-Socket™ technology lets the Intuicom RTK Bridge®-X actually host corrections from your base station. As your GPS/GNSS receiver generates corrections, the RTK Bridge-X hosts those corrections on the Internet. These corrections can then be accessed by up to ten (10) rovers over the Internet, via the RTK Bridge-X, and still be broadcast via radio when you need to supply RTK corrections when cell coverage is not available.

Over the Internet via Base-2-Socket™
